

World War 1 Interactive Display Package Framework for the World War 1 Display

- ✓ **Insert Content to Build Your Own Custom Display**
- ✓ **Easy to Modify the Structure and add Items In-House**
- ✓ **Free to use on InfoAktiv Systems**

A free framework of categories, folders, and graphics that you can use and adapt to build your own World War 1 interactive touch screen display.

This free framework forms the skeleton of your World War 1 interactive display. You can modify it in any way you want to reorganise it, include different topics and flesh it out with presentations, documents, videos and other multimedia content.

It is extremely easy to add individual screens of content in-house using tools such as PowerPoint. You can also take advantage of the wealth of content that is already available from the InfoAktiv AppStore and other sources. Material in the AppStore is designed so that it can easily be edited, right down to the individual screens of content. That makes it quick and easy to build your own unique display, based on existing content, but tailored with items of local interest and with your own 'look and feel'.

The Benefits of Using InfoAktiv.

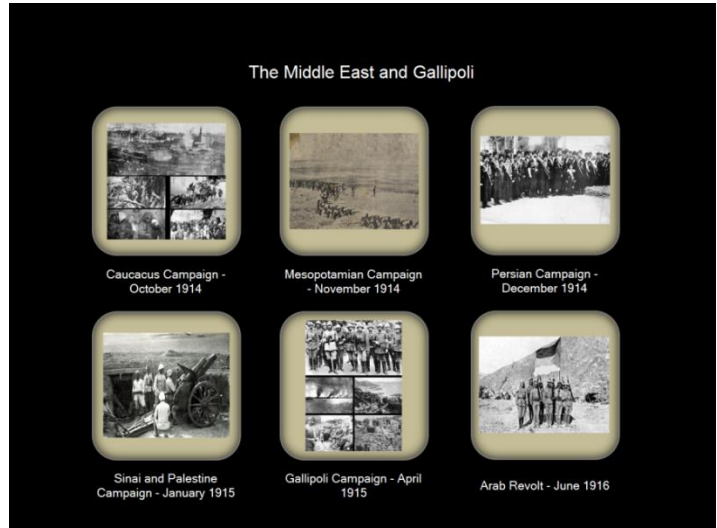

Because it runs on an InfoAktiv system, the package is amazingly easy to tailor, expand, adapt and update. It can be modified by anybody who can use a PC. This removes any reliance or expense associated with using outside contractors and makes it a perfect and very gratifying project for volunteers to work on.

InfoAktiv systems are a superb asset and a long-term investment because they can be used and re-used for any subject. Displays never need to become stagnant or out-of-date.

What's in the Package?

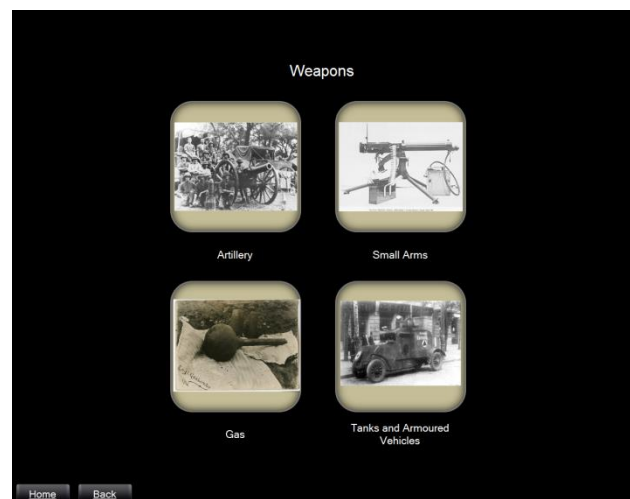

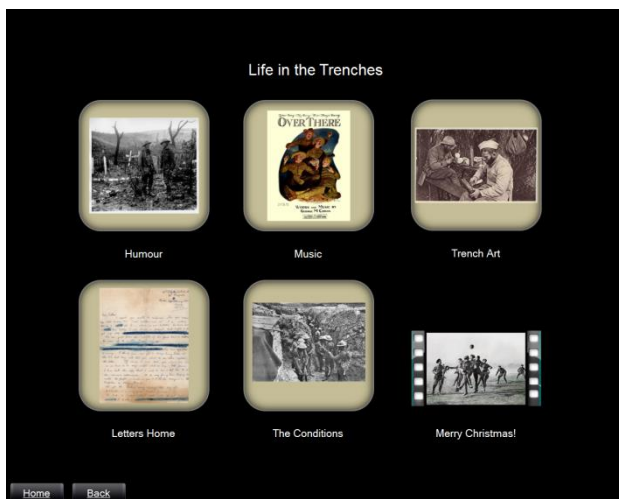

The basic framework provides a structure of more than fifty different categories which can be populated with information. You as the owner have complete flexibility to add, remove or rearrange the categories and information within them. Pictorial buttons or 'icons' are provided to access each category through the InfoAktiv touch screen display.

All of the graphics such as the icons and graphics can be modified and replaced to create a display that is unique to your organisation.

Layered Information

The package is designed to allow visitors to 'dip in' and find out about the topics that interest them. This works for the casual visitor who has limited time to spend on individual items or somebody who wants to dig deeper into specific topics. Owners can add any amount of further information to this package or rearrange the contents to suit their own displays.

Simple to Use

Just touch a picture and it takes the user in to the category or item selected.

Easy to Change

If you, as the system's owner, want to change the layout or structure it is as easy as rearranging folders and files with Windows Explorer.

Graphics, text and categories can be customized and expanded to add your own information or branding. Anybody with basic PC skills can do this.

The screens of detailed information about individual items can be created in a number of different formats. The most popular ones are PowerPoint presentations, PDF documents, videos, audio files and Flash animations. These screens can be created in-house using familiar software such as PowerPoint and Word. There is already a wealth of information available that can be used with or without modification, this can be found in places such as the InfoAktiv AppStore www.infoaktiv.com/appstore.
