

## World War 1 Interactive Display Package

# Transport

- **Easy to Modify In-House**
- **Vast Capacity to Expand**
- **Free**

***A short package containing high-level overviews of the most significant types of transport in World War 1. Use it 'as-is' or as the basis for your own display.***

The transport used in World War 1 provides a fascinating insight into the technological transitions of the period. New technology such as motor vehicles was coming into widespread use, but horses were still widely used and considered superior for many tasks.

World War 1 Transport is an off-the-shelf multimedia package designed for museums and education. It can be used as-is or tailored in-house to add whatever extra information an individual organisation wants. The graphics and branding can be changed too so that any school or museum can 'make it their own'.

### **The Benefits of Using InfoAktiv.**

Because it runs on an InfoAktiv system, the package is amazingly easy to tailor, expand, adapt and update. It can be modified by anybody who can use a PC. This removes any reliance or expense associated with using outside contractors and makes it a perfect and very gratifying project for volunteers to work on. InfoAktiv systems are a superb asset and a long-term investment because they can be used and re-used for any subject. Displays never need to become stagnant or out-of-date.

## What's in the Package?

### 7 Categories of Transport

Divided into motorized and non-motorized sections, the package contains 1 or 2 screens on each of 7 categories: Horses, Bicycles, Buses, Trains, Ships, Trucks and Motorcycles. This also includes a high-level overview of transport during World War 1.

### Layered Information

The basic package is designed to allow visitors to 'dip in' and find out about the topics that interest them. This works for the casual visitor who has limited time to spend on individual items or somebody who wants to dig deeper into specific topics. Owners can add any amount of further information to this package or rearrange the contents to suit their own displays.

### Simple to Use

Just touch a picture and it takes the user in to the category or item selected.

### Easy to Change

If you, as the system's owner, want to change the layout or structure it is as easy as rearranging folders and files with Windows Explorer.

Graphics, text and categories can be customized and expanded to add your own information or branding. Anybody with basic PC skills can do this.

The description pages are easy to modify using PowerPoint, and an infinite number of folders containing further information can be created using everyday software packages and formats.
